

HYDRON INCORPORATED

ADJUSTABLE 16 STRAND POLYESTER FLIPLINES

ARBORIST
EQUIPMENT

7V08A110M (10' length Bluestreak)

The adjustable fliplines from Buckingham makes climbing with lanyards safer and easier. The addition of the microcenter gives the user the ability to easily adjust the length of the lanyard with one hand. With the microcenter at the user's side, (where it's needed) no longer will the user have to hug the tree to adjust his lanyard. Unlike other adjustable lanyards that only adjust to one half of their total length, the adjustable flipline will adjust from just a couple of inches up to its full length. Each flipline comes with a 1706 Locking Rope snap on one end and an eye splice on the other to prevent rope from slipping through the ascender. Fliplines are available in custom lengths of 1/2" Bluestreak, Safety Blue, High Vee and XTC Spearmint. Also available with Gibbs ascender. (Add Suffix P) Last two numeric digits designate lanyard length.

7V08B110M 10' High Vee with microcenter
7V08C112P 12' Safety Blue with Gibbs ascender
7V08D114M 14' XTC Spearmint with microcenter

5004A
For use with 1/2" diameter rope only. (Add suffix "M" to model number)

5004P
For use with 1/2" diameter rope only. (Add suffix "P" to model number)

24S-7
Flipline connection strap is an inexpensive alternative to a locking twist clevis for proper orientation of your mechanical adjustment style microcenter. Simply girth hitch to the ascender and connect to your Dee ring using a self closing, positive locking type carabiner. The strap adds approximately 4" to the work positioning system. The strap can also be cut as a last resort to perform an aerial rescue if used with a wire core flipline.

WORK POSITIONING LANYARDS

Prusik Lanyard 7VV2A110J (Carabiner not included, see page 29.)

The 2 in 1 Safety Prusik Lanyard provides the user a means to stay continuously secured to the tree when climbing over obstructions. Buckingham uses different color thimbles to easily distinguish each end of the lanyard. This eases the task of climbing over obstructions. This particular model is 10' in length. Available in any length desired by designating the last numeric digit as the length, i.e. 7VV2110J (10' length).

The Prusik Loop is made of 16 strand 1/2" braided blue streak rope, which is looped around a 3-strand twist nylon rope. The combination of braided rope and twisted rope offers the best combination for this application.

"Climber approaches an obstruction."

"He then attaches second leg of lanyard to tree above obstruction and connects to saddle."

"Simply disconnect original leg of lanyard and continue climb."

HIP PRUSIK LOOPS

P7J8A26
26" Eye to Eye 16 Strand 1/2" Blue Streak (Carabiner not included)

P7J624
24" Eye to Eye 12 Strand 3/8" Coated Tenex (Carabiner not included). P7JV24 has 1706 rope snap. 34" & 40" also available.

P7J233
33" Eye to Eye 1/2" 3 Strand Nylon (Carabiner not included). Also available with 1706 Locking Rope Snap - PJ72V33

P7J8AV26
26" Eye to Eye 16 Strand 1/2" Blue Streak Hip Prusik with 1706 Locking Rope Snap
